AN OPENCODE SKILL

signature

The decision engine for AI web design. It picks the page shape, the identity — then enforces both.

github.com/Heamnt-beginner/frontend-design-skill

THE DEFAULT TRAP

Every AI page looks recently generated.

Ten page shapes, none picked.

Twenty palettes, all sampled.

No receipts — designed from memory.

signature makes the model commit — to one named shape, one named identity, with evidence.

Four steps, all evidence-tagged.

01

Shape

Pick one from your domain's trio — under 6 minutes.

02

Evidence

Open the reference sites live. No from-memory design.

03

Identity

One of 20 named palettes and type pairings.

04

Gates

20 mechanical checks before anything ships.

THE GATES

20 mechanical gates. Fabricated facts banned.

- gone — ~~fake metrics, reviews, prices~~
- enforced — single-line CTAs, named transitions, reduced-motion fallback
- recorded — the ledger stamp lists only URLs actually opened

Placeholder slots say “confirm” — never invent. Honesty is a build gate, not a vibe.

A Kerala travel page. Scroll Story × Forest Confection.

ink | cream | cocoa | leaf

Meet India, slowly.

Anton display + Archivo body — five real Commons photos, attributed on-image.

Conceived, built, gated and critiqued in one session.

Clone it. Drop it in your skills folder.

Then type /signature in OpenCode
and describe what to build.

```
git clone https://github.com/Heamnt-beginner/frontend-design-skill
```
